The Youth Risk Behavior Survey (YRBS) was developed by the Centers for Disease Control and Prevention (CDC) in collaboration with federal, state, and local agencies, to monitor health-risk behaviors known to be related to the mortality, morbidity, and social problem rates of America's youth. The survey is conducted every other year at the national and state/local levels. The behaviors addressed by the YRBS fall into six categories: 1) Behaviors that result in un-intentional injuries and violence, 2) Tobacco use, 3) Alcohol and other drug use, 4) Sexual behaviors, 5) Dietary behaviors, and 6) Physical activity.

If you are interested in obtaining further information about the YRBS, including copies of the questionnaires, national and local results or descriptions of the survey process, you can visit the Centers for Disease Control and Prevention Youth Online website at <http://www.cdc.gov/yrbss>. For full MDCPS YRBS reports visit <http://oer.dadeschools.net>.
